

The nResult Advantage

What if you could access well-qualified project support that looks and acts more like an internal team? What if you could quickly and easily augment internal resources with experienced engineers who understand your unique processes and needs?

nResult is the answer.

Taking a dramatically different approach to flexible project support means that nResult can help Fortune 500 companies; startups and everyone in-between remain competitive with flexible project support.

Time and Money Savings

Ramping up your project team for peak project demands is expensive, often inefficient, and sometimes unfeasible. nResult's onsite, offsite and blended project support services provide a welcome alternative.

With well-qualified engineers who understand your specific project processes and a support infrastructure that acts as a seamless extension of your internal resources, nResult provides a welcome evolution of traditional contract and contract-to-hire project support. By effectively aligning with your project demands, nResult can save you time, money, and energy.

Flexible Project Support

You know firsthand the headaches involved in finding and vetting temporary engineers. Multiply those headaches if you need these qualified engineers on short notice. nResult offers a welcome alternative to typical contract-based approaches to temporary labor.

nResult maintains a highly experienced team of long-term, salaried engineers, who remain our full-time employees throughout the entire duration of your project- no matter how long or short. Why take this approach? Our engineers and their acquired knowledge are simply too valuable.

This isn't temp-to-hire, this isn't traditional contractor support. This is an entirely new approach to meeting a common need that we have seen throughout a wide range of high-tech providers. Working with nResult connects you with the experienced knowledge workers your project demands-fast. And because there's no long-term contract commitment, it's easy to release nResult engineers when your project needs decline.

Selected for their intelligence, capability, and adaptability, nResult's pool of well-qualified engineers hail from diverse backgrounds and industries. No matter what your project needs, chances are nResult can connect you with one of our engineers with direct or indirect experience. If your project needs expand, nResult picks up the slack, sending additional engineers to your location at a moment's notice.

And because nResult engineers remain our employees before, during and after your project, we can usually connect you with the same experienced engineer at a later date, if desired. This is an offering typical contract agencies can't match. In the event that your nResult engineer is offsite, another nResult engineer cross-trained by your experienced engineer can be provided.

Not only are nResult engineers certified and degreed, they are trained to be excellent communicators who work well with others and accept responsibility for educating themselves, saving you valuable time that is often lost when working with outside contractors. And because there is no temp-to-hire expectation, releasing nResult engineers when project needs diminish is easy.

No Long-term Contracts

Dealing with typical contract labor at the close of a project phase can lead to frustrations and disappointments all around. Often, all you need is short-term project support. This is at odds with contractors who may expect a full-time permanent position. The result can be awkward and difficult situations for everyone involved.

When you work with nResult, our engineers remain our permanent employees. You can easily send our salaried engineers back when you have no further work for them, eliminating the costly obligations of long-term contracts. We accept the responsibility for employee overhead costs including sick time, vacation time, holidays, taxes and benefits. You get all the advantages of a well-qualified engineer available at a moment's notice and easily released back to nResult for similar needs in the future.

Engineer Cross-Training

Once contractors leave your project, they carry the training and knowledge you invested with them. This leaves you in the same position as before-trying to find qualified people and attempting to train under tight time constraints and project deadlines.

Working with nResult means that we accept full responsibility for training our engineers on your needs and processes. If desired, these engineers can cross-train other well-qualified nResult engineers regarding your specific project and process needs either at your site, or at one of our local offices. This way, if your project needs ramp up unexpectedly, you have knowledgeable project support resources available at a moments notice.

Upon project completion, these nResult engineers cross-train additional nResult engineers, dispersing their knowledge throughout nResult's knowledge base. nResult stores this valuable process knowledge you have invested in our engineers, eliminating the need to repeatedly train new contractors. As a result, if your project needs expand, you have a group of pre-trained engineers who understand your processes and are ready to engage at your request.
